* This is a sample excel file of how you can track your prescribing of buprenorphine in OBOT that will satisfy the DEA if you are ever audited.
The DEA, if they do audit you, will come to the address listed on your DEA license and want to see your prescribing and/or dispensing logs of buprenorphine.
If you see patients at several sites, you must still track all prescriptions/dispensing for all sites and have this information available for a DEA audit. This way you do not need to provide patient charts.
